Experiment Set “Conduction of Impulses to Nerve Fibres”

Item No. 1000538 [U11120]

Weight 0.5 kg

[Read More](#)

SKU:

Categories: Nervous System Models

Product Description

Experiment Topics

- Simulation of continuous conduction along non-myelinated axons
- Simulation of saltatory conduction by means of a model experiment
- Transmission of information by neurotransmitters

Experiment Set “Conduction of Impulses to Nerve Fibres” according to Prof. Dr. Matthias Ducci / Prof. Dr. Marco Oetken

Model for simulating the conduction of impulses along nerve fibres.

The model experiments are based on the property of iron to develop a protective oxide coating in acid

solutions under specific conditions. This impressive analogical model is based on the reversibility of the process of passivation and the appearance of a reactivation along a long iron rod. The materials provided allow the students to use the model to demonstrate continuous and saltatory conduction as well as the principle of transmission of neurotransmitters. The required chemicals (hydrogen peroxide, sulphuric acid, sodium chloride solution) are not included.

Contents:

- 1 acrylic trough
- 3 iron rods
- 1 zinc electrode
- 15 jackets for isolation of sections of the iron rod
- 1 sandpaper
- detailed experimental instructions
