**TIP:** You will also receive access to a **free 3-day trial to all premium features** of the Complete Anatomy app when you sign up for your 3B Smart Anatomy course.

To unlock these benefits, simply scan the label located on your model and register online. All 3B Smart Anatomy features are **completely free of charge** for you. [Click here](#) to learn more.

This 3B Scientific® Skin Pathology model shows healthy skin and 5 different stages of malignant melanoma on the front and back, enlarged 8 times:

- healthy
- malignant cells are found at the surface, within the epidermis
- malignant cells fill the epidermis, a few invade the papillary layer
- malignant cells fill the papillary layer
- malignant cells invade the reticular layer
- malignant cells have reached the subcutaneous fatty tissue, satellite cells approach a vein

In the top view of the skin cancer model, the individual stages of externally visible skin changes are shown, allowing for an assessment according to the “ABCDE” criteria. The sides of the skin cancer model show the various levels of invasion into the skin layers according to Clark (I-V) and the tumor thickness according to Breslow (in mm). 5 original color illustrations on the base of the skin cancer model show various types of malignant melanomas. The skin cancer model comes mounted on a base.

The skin cancer model is a great tool for illustrating this skin pathology.
