### Product Description

This hand-held device simulates both heart and breath sounds and allows the determination of these by plugging in one of 7 different menus (see W49401/1005885, W49402/1005886, W49403/1005887, W49404/1005888, W49405/1005889, W49406/1005890 and W49436/1018195), each containing 16 different sounds\*. The Heart and Breath Sounds Simulator unit includes two external sounders with which students can auscultate the sounds with a stethoscope. Linking additional stethoscope sounders (see W49430), up to 15 students can auscultate at the same time. A Loud Speaker may also be connected. Additionally, the unit has a volume control and two LED's that illuminate during systole

(heart menu) and expiration (breath menu).

Virtually maintenance-free, the unit is powered by a 9 volt battery.

\* All data used in the menus are actual patient sounds. Sounds of the same name are from different patients in different menus to show appearance variations.

Cartridges with sounds required as well and not included in this item.
