**SKU:**

**Categories:**Auscultation

## Product Description

AURiS is a simulation stethoscope for realistic auscultation training. It functions as a hybrid simulator and can be used with both a standardized patient and a manikin. The sounds library is controlled

remotely inside the AURiS auscultation training app. AURiS uses advanced sensor technology paired with the in-app sounds library that includes heart, lung, bowel and bruit sounds in an easy to use instructor interface.

The AURiS training stethoscope will only play the selected sounds when placed on a body. When placed on a body, a sensor activates the sound file selected by the instructor and the student instantly hears the sound through the training stethoscope.

Instructors operate the AURiS Software by connecting the stethoscope to a mobile device (iOS) via Bluetooth. The setup is done by simply pairing the app with AURiS, which then automatically calibrates the stethoscope. The stethoscope is wireless and receives sounds at a range of up to 10 meters (30 feet).

With the easy to use instructor interface, AURiS can be used on manikins and standardized patients to increase simulation fidelity. The system comes packaged with the training stethoscope to be paired with the AURiS app, including multiple heart, lung and bowel sounds.

### **AURiS Auscultation Training Features:**

- Simulates a real stethoscope
- Wireless connection
- Auscultation Training App
- 22 heart and 13 lung sounds
- Bruits and bowel sounds
- Create patient scenarios with ease
- Add sounds to the file
- Adjust volume remotely
- Adjustable settings
- Works with iOS

### **Delivery content:**

- AURiS training stethoscope simulator
- AURiS storage bag
