Product Description

NENASim Human Patient Simulator (HPS) Xtreme

The NENASim-HPS Xtreme is an advanced wireless scenario-based simulator. It simulates a baby

from 0 to 6 months old. To be used for a full range of medical skills, procedures and team training. With the NENASim HPS Xtreme - which includes training software, the patient monitor and the baby simulator - predefined and customizable scenarios can be played out by medical teams.

Software included: Tutor, Scenario Editor, Patient Monitor, ECG and Sound Editor.

The NENASim HPS Xtreme is fully interactive and empowered by Windows to give the user full control:

- The patient monitor, which accurately replicates the graphs and values as shown on the tutor software, making any adjustments by the tutor directly visible.
- Tutor software for tracking, commenting and evaluating the full scenario.
- Possible to add three cameras.
- Scenario-editor for creating and editing your own scenarios. All parameters, responses and sequences can be adjusted within an easy-to-use program
- An ECG editor and sound editor. User-friendly editors to add your own ECGs and sounds to scenarios.

Benefits:

- Perfect for training medical professionals, especially NICU-departments.
- Realistic skeleton, recognizable landmarks, accurate movement degrees, with a durable soft skin.
- Movement of limbs, head, eyelids, heart beats and breathing movements.
- Measurable effectivity and results of CPR.
- Pulse detectable in various places; axillary and femoral. Intubation through the anatomically realistic airway,
- Stethoscope simulator: detects location and emits suitable isolated sounds.
- Various parameters output on the patient monitor: ECGs, SpO2, CO2, ABP, CVP, PAP, PCWP, NIBP and TOF.
- Full scenario training: ready-made and userfriendly customizing, with strong feedback and review components.
- Ideal for individual skills-training and team training.
- A wide variety of vocal sounds: laughing, crying, hiccups, coughing, grunting and breathing.
- Full simulation of breathing patterns with different rates, depths and complications.
- Colorization of the skin in the cheek, chin and extremities, to simulate conditions like cyanosis, jaundice, paleness and redness.
- Wireless and tetherless control: able to be used everywhere.
