Product Description

ORTHObones, the leader in **artificial bones**, is used by surgeons, orthopaedists and medical engineers worldwide. These high quality, biomechanical bones perfectly resemble a human bone in terms of form and characteristics. These **realistic bones** are constructed to simulate the two distinct layers of real human bones; the hard outer cortical shell and the softer inner cancellous bone. The excellent

biomechanical characteristics make these bones an exceptional value!

The Mandible with Teeth is ideal for demonstrating procedures like corrective jaw surgery or displaying medical devices used in craniomaxillofacial surgeries.
