Product Description

This birthing simulator is especially designed to demonstrate and practice the palpation of the birth canal. It shows the relationship between fetal head and ischial spines of the pelvic bone during birth. A simulated fetal head of the birth simulator can be locked in three different stations to demonstrate its position above, between and below the ischial spines. This anatomical birthing model is a great addition to any lesson about the human birth process. The birthing simulator is delivered with storage case. It is great for any gynecological and birth training.
