SKU:

Categories: Moulage and Wound Simulation

Product Description

These graphic explosion wounds offer detailed enhancements to challenge any practitioner's level of care. These moulages feature missing muscle and bone, flesh avulsions, fatty tissue, and bone ends. The blood supply line from the SMART STAT simulator connects quickly, without blood splatter, to the moulage, and has pressurized blood flow to create a messy wound. Proper application of a tourniquet will halt the blood flow. Xtreme Bleeding Moulages can be used with the STAT line of patient simulators. External blood supplies must be used if not attached to the SMART STAT. Consists of a molded moulage piece and an interior leg structure. This feature provides a simple connection to the existing knee joint of the SMART STAT patient simulator using an easy-to-install knee pin. Ship weight 10 lbs.
