SKU:

Categories: Nervous System Models

Product Description

This enlarged model, magnified eight times the natural size, provides a highly detailed threedimensional representation of the spinal cord and spinal nerves, including a cross-sectional view of the cord. It consists of two parts—a 3D anatomical model and a flat section of the spinal cord—featuring more than 20 labeled anatomical structures to aid in learning and understanding. Accompanies an interactive 3D anatomical model with augmented reality and is a great tool to stimulate learning and support. This platform allows students to engage in comparative analysis of anatomical models as they compare and contrast the structure of individual organs. This initiative also provides a platform for continuing education, providing opportunities for all students to increase their knowledge of anatomy, physiology and pathophysiology. One-Year Warranty Ship Weight (LBs): 5.5 lbs. Dimensions. (Inches): 11.02 x 16.14 x 11.02
