SKU:

Categories: Ear Models

Product Description

Model composed of five parts that shows a three-dimensional section of the cochlear duct, tectorial membrane, basilar membrane and vestibular membrane. The organ of Corti is represented including cellular receptors that transform sound vibrations into electrical signals. Important anatomical structures are numbered and indicated for easy understanding; Accompanying an interactive 3D anatomical model with augmented reality is a great tool to encourage learning and support. This platform allows

students to engage in comparative analysis of anatomical models as they compare and contrast the structure of individual organs. This initiative also provides a platform for continuing education, providing opportunities for all students to increase their knowledge of anatomy, physiology and pathophysiology. One-Year Warranty Ship Weight (LBs): 11 lbs. Dimensions. (Inches): 19.69 x 12.99 x 7.87
