SKU:

Categories:Lung Models

Product Description

Model 1.5 times life size that illustrates some of the pathologies of the pulmonary system caused by microbial infections: Lung abscess, pneumonia and tuberculosis. The surface of the model is black to demonstrate the visual effect of those using tobacco. A cancerous tumor is also shown in precise detail. All pathologies are shown separately on the model with a realistic representation of their morphology. Made with long-lasting synthetic material. Accompanying an interactive 3D anatomical model with augmented reality is a great tool to encourage learning and support. This platform allows students to engage in comparative analysis of anatomical models as they compare and contrast the structure of individual organs. This initiative also provides a platform for continuing education, providing opportunities for all students to increase their knowledge of anatomy, physiology and pathophysiology. One-Year Warranty Ship Weight (LBs): 2.2 lbs. Dimensions. (Inches): 4.72 x 4.72 x 7.87
