SKU:

Categories: Moulage and Wound Simulation

Product Description

These graphic explosion wounds offer detailed enhancements to challenge any practitioner's level of care. These moulages feature missing muscle and bone, flesh avulsions, fatty tissue, and bone ends. The blood supply line from the SMART STAT simulator connects quickly, without blood splatter, to the moulage, and has pressurized blood flow to create a messy wound. Proper application of a tourniquet will halt the blood flow. Xtreme Bleeding Moulages can be used with the STAT line of patient simulators. External blood supplies must be used if not attached to the SMART STAT. Xtreme Trauma Bleeding Arm. This arm can replace the left arm of the SMART STAT and consists of a molded moulage piece with a structure that offers a simple connection to the existing IM injection site of a SMART STAT patient simulator. Shipping weight 11 lbs.
