Categories: Digestive System Models

Product Description

A life-size model that shows the human digestive tract from the mouth cavity to the rectum. The oral cavity, the pharynx and the first part of the esophagus are dissected along a mid-sagittal plane. The liver is shown along with the gallbladder and the pancreas is dissected to expose internal features. The stomach is open along a frontal plane; the duodenum, cecum, part of the small intestine and rectum are open to expose its interior. The transverse colon is removable. Made with long-lasting synthetic material. Mounted on durable polymer base; Accompanying an interactive 3D anatomical model with augmented reality is a great tool to encourage learning and support. This platform allows students to engage in comparative analysis of anatomical models as they compare and contrast the structure of individual organs. This initiative also provides a platform for continuing education, providing opportunities for all students to increase their knowledge of anatomy, physiology and pathophysiology. One-Year Warranty Ship Weight (LBs): 7.7 lbs. Dimensions. (Inches): 36.22 x 12.99 x 5.91
