SKU:

Categories: Joint Models

Product Description

One-piece, life-size model of a realistic representation of the detailed human ankle that shows the anatomical structures and physiological movements of an ankle joint with its ligaments. Articulated model that displays ligaments, bones that make up the ankle joint, provides fidelity to the details. The model displays the following structures: Tarsal Bones: Proximal row - Calcaneus and Talus, Distal row - Navicular, Cuboid, Medial Cuneiform, and Lateral Cuneiform; Metatarsal Bones: Proximal and

distal epiphysis (base and head); Toe bones: Proximal, middle and distal phalanges and Hallux; Peroneum, Lower part of the Tibia and Fibula, Astragalus, Scaphoid, Upper ankle joint; Subtalar joint, Transverse tarsal joint, Tarsometatarsal joint, Metatarsophalangeal joints, Interphalangeal joints, Ligaments, Achilles tendons, Peroneal longus tendons of the ankle. Made from long-lasting synthetic material and assembled by hand. Accompanying an interactive 3D anatomical model with augmented reality is a great tool to encourage learning and support. This platform allows students to engage in comparative analysis of anatomical models as they compare and contrast the structure of individual organs. This initiative also provides a platform for continuing education, providing opportunities for all students to increase their knowledge of anatomy, physiology and pathophysiology. One-Year Warranty
Ship Weight (LBs): 2.2 lbs. Dimensions. (Inches): 8.27 x 6.3 x 11.81
